Version 31 mars 2020
Add works from another systems

Add works from another system such as ResearcherID, Scopus Author ID, or CrossRef. The full list of other systems that allow works imported to ORCID can be found here.

- **Add works from Scopus**

All publications indexed in Scopus can be added to ORCID ID, either through “connect to ORCID” from Scopus, or “Search & link” from ORCID.

- Login to ORCID
- Under “Works”, click on” + Add Works” and select “Search & link”. Then click on “Scopus Elsevier”.

- Select the profile(s) that contain publications authored by you, click on “Next”
• Select the preferred profile name then “Next”

• Review your authored publications and remove those that do not belong to you.
• Click on “Search for missing documents” to search for publications that are not on the list.
• Check if all your publications are included in your profile before clicking on Next. If not, click back and search again.

• Check if all your publications are included in your profile before clicking on Next. If not, click back and search again.

Review the Scopus profile
Please review the information below to ensure that the data to be sent to GRCID is correct.
• **Send the Scopus ID to ORCID.** Enter your Institutional or professional email address and click “Send Author ID”

• Click on “Send my publication” list to add your publications to ORCID. Your publications in Scopus will then be added to your ORCID profile.

• You can click on “return to ORCID” to see the publications added to your ORCID

• You can only add publications from Scopus to ORCID, not the other way around.

• **Add works from CrossRef Metadata Search**

Crossref is an official Digital Object Identifier (DOI) Registration Agency, a global, not-for-profit membership organization of scholarly that provides persistent links for scholarly content.

**CrossRef Metadata Search** via ORCID platform allows you to search the metadata of millions of journal articles, books, etc, by title or DOI, and add works to ORCID profile
If you have some publications that cannot be retrieved from Scopus or Web of Science (ResearcherID), you may try **CrossRef** before doing it manually.

- Under Works, click on **"+ Add Works"** and then **"Search & link"**.
- Choose **"CrossRef Metadata Search"** from the list.

- Click **Authorize** to allow CrossRef Metadata Search to add publications to your ORCID profile.
- Search by DOI or title to locate the article. Then, select the work you wish to add and click on **Add to ORCID**.
- You will see the source from CrossRef Metadata Search for the works added from it.
• Note that the data added via CrossRef may NOT be as complete as those imported from Scopus or ResearcherID. See the comparison below.
